GreenPower Premium

Riverside Public Utilities (RPU) is committed to a Clean and Green Riverside. To promote this effort, RPU is offering a voluntary program available to all electric customers who want to help further Riverside's Clean and Green goal.

Customers who opt into this voluntary program will contribute an additional \$0.02 per kilowatt hour (kWh) along with their current per kWh rate towards the purchase of renewable energy.

What is Green Power?

The term "green power" refers to electricity produced from renewable energy sources, such as wind and solar power, geothermal, hydropower, and biomass.

How can I participate in making Riverside Clean and Green?

By participating in this voluntary program you will support increased development of renewable energy sources, which can reduce the burning of fossil fuels, such as coal, oil, and natural gas.

Customers can elect to participate in the program via an online application form, a bill insert, or requesting an application from customer service. New customers will be told about the availability of a Green Power Premium at the time of new service. Since the program is voluntary, customers may opt out of the program at any time.

What will my contribution go towards?

Green Power Premium funds will be used to help Riverside exceed its renewable power goals with the purchase of renewable energy.

How will contributing to Green Power through this program affect my monthly bill?

Although the Green Power Premium is available to all RPU electric customers it is anticipated that the primary group of participants will be residential. As many residential customers live in apartments, rent, or the installation of solar panels is not feasible, the Green Power Premium offers them the opportunity to **'Go Green'**.

A resident whose typical monthly energy use is 600kWh (approximately \$73 per month) who opted into this program would pay an additional \$12 per month.

If you want to see how the **GreenPower Premium** will affect your monthly bill, take your

monthly kWh usage x \$0.02

This will give you the additional cost per month you will pay.

If you have additional questions about the **GreenPower Premium** or how it will affect you please call us at
